Contents

Introduction	vii
Acknowledgments	viii
Unit I	
Chapter 1 – Roman Numerals	3
Chapter 2 – Introduction to Fractions	9
Chapter 3 – Multiplication and Division of Fractions	19
Chapter 4 – Addition and Subtraction of Fractions	35
Chapter 5 – Addition and Subtraction of Decimal Fractions	55
Chapter 6 – Multiplication and Division of Decimal Fractions	65
<i>Fraction Review</i>	87
Unit II	
Chapter 7 – Percentage	93
Chapter 8 – Ratio and Proportion	115
Chapter 9 – Measurement Systems	129
Unit III	
Chapter 10 – Dosage and Concentration Applications	161

Unit IV

Chapter 11 – Diluting Concentrations and Infusion Rates 191

Chapter 12 – Graphs and Graphing Techniques 209

Unit V

Chapter 13 – Statistical Methods and Basic Statistics 227

Selected Solutions 239

Introduction

This text provides a one-semester course in the basics of mathematics needed for Veterinary Technicians and Assistants. The course covers fractions, decimals and percentage without the use of calculators as is the case on many State Board Exams. The language is designed to be readable and in terms of everyday usage rather than formal and strict mathematical terms.

This revised edition has used many of the suggestions for improvement that have been sent to us. Some material has been reordered to improve presentation.

In addition to basic mathematical computations, several chapters are devoted to application problems involving dosage, concentration, dilution and the computation of drip rates. The English, Metric and Avoirdupois systems of measurement are included with intra- and inter-system conversion and computation. An introduction to reading graphs is presented as well as a chapter on basic statistical concepts and using basic statistical measures.

The workbook style of the text allows students freedom to move at a pace that ensures mastery of the material as well as flexibility for covering topics in any prescribed manner. Students should read the material, study the examples, and work all the exercises in a particular problem set before checking answers. The answers to odd-numbered exercises are provided in the Answer Keys.

In many programs, this may be the only math course students are required to take. If this is one of your early course offerings, the material will be valuable and useful in other courses, in particular chemistry and clinical practices labs.

It is our hope that you will find the material useful and pertinent. If you have comments or suggestions please contact me at:

Acknowledgments

We would like to thank those who contributed in the writing and production of this text. In particular, Doctor Paul Porterfield, Lori Rainforth and the Veterinary Technology Department of Central Carolina Community College and all the Veterinary Medical students who used early versions of the text and offered suggestions for improvement and corrections.
